**BRIEF
PRODUCTS
CATALOGUE**

DEAR PARTNERS!

On behalf of Chelyabinsk Compressor Plant LLC (LLC CHKZ) let me pay you obeisance and express our hopes for close cooperation in the respects power equipment. We can offer you the vast range of compressor, pump and power-generating equipment. For the range of main technical characteristics please check the present catalogue.

The plant has a strong presence on the Russian market as the largest manufacturer of compressor and general industrial equipment, gas separation plants, compressor equipment for oil associated gas transporting as well as pumping plants including fire extinguishing pump plants.

After you study the product catalogue you are welcome with your enquiries, which will be prompt and properly handled by our experts.

ABOUT US

LLC "CHELYABINSK COMPRESSOR PLANT" is the largest manufacturer of screw compressor units at the Russian market. The plant was founded in 1999 and produced rotary vane compressors. Over 17 years the plant has considerably broadened the range of the products and for the present offers:

- screw compressor units of low pressure, driven from electric and diesel engines;
- piston compressor units of medium and high pressure;
- gas separating (nitrogen) membrane and adsorption units;
- diesel generator units;
- equipment for air and gas treatment; filters, separators, dryers;
- air receivers and capacitive equipment;
- air, nitrogen and gas (inclusive of natural gas) compressor stations.

The plant offers a full scope of services in design, production and "turn-key" implementation of packaged compressor equipment with communication facilities into the customers' technological processes, as well as performs audit of pneumatic systems at the customer's site.

LLC "CHKZ" sales geography comprises all the territory of the Russian Federation, neighbouring countries and abroad. Compressor units and station operate both in the tropical climate in Cuba and in severe conditions of Extreme North. The plant has its own local offices in 6 regions in Russia and one representative in Kazakhstan. Dealer service centers function in all regions throughout Russia.

Moving forward, LLC "CHKZ" constantly strives to improve its products, broaden the assortment, involve industry specific institutes, scientists and young specialists, and graduates of technical institutions.

SCREW COMPRESOR UNITS DEN

Brief description

Compressors DEN are designed on the basis of horizontal positive-displacement twin-screw oil-flooded compressors with a belt or coupling drives from an electric motor. They contain air and oil cooling and filtration systems, pressure and temperature control systems and are supplied with intelligent control units enabling operation without staff attendance. On customer's request the compressors are complete with compressed air treatment equipment and supplementary options.

Technical parameters range

Parameter	UOM	Range of values
Nominal capacity	m ³ /min	0,32...54,0
Discharge pressure, exc.	MPa	0,7...1,3
Engine power	kW	4,0...400,0
Frequency regulation	%	No / 50 / 75
Supply voltage	V	220 / 380 / 6000
Current frequency	Hz	50
Number of phases	-	1 / 3
Operational temperature	°C	+1...+35
Compressed gas	-	Air
Motor start	-	Direct/step/soft
Cooling type	-	Air/liquid
Dimensions	mm	600x750x650...3400x2100x2100
Weight	kg	150...5170

Notes: The model range and detailed technical parameters are specified in Attachment 1.

Application area

Compressor unit	Application area															
	Power	Engineering	Metallurgy	Oil development	Mines, pits	Oil refinery	Chemical industry	Construction	Road Construction	Rail road	Food industry	Wire laying	Car service	Small-scale production	Workshop	Emergency services

Notes: St – available in standard configuration

Designation interpretation:

DEN-22ShM-OR+ "Optim"

DEN – compressor unit mark

22 – nominal power of the drive motor (from 4 to 400 kW);

Sh – model configuration in a soundproof housing (no symbol stands for housing-free configuration);

M – drive type (M – via flexible coupling, no symbol stand for belt drive);

O – model configuration with a refrigeration dryer (no symbol stands for dryer-free configuration);

R – model configuration on a 500 or 900l receiver (no symbol stands for receiver-free configuration);

+ – effective model configuration (no symbol stands for ordinary configuration);

Optim – modification ("Optim" implies a motor speed regulating system, "Volt" is equipped with a high-voltage 6 or 10kW motor, "Dew" – with liquid cooling, "Miner" and "Ex" are used for explosion-proof version, no symbol stands for standard configuration).

SCREW COMPRESSOR UNITS KV

Brief description

Compressors KV are designed on the basis of horizontal positive-displacement twin-screw oil-flooded compressors with a belt or coupling drives from a diesel engine. They contain air and oil cooling and filtration systems, pressure and temperature control systems and are supplied with an electro-pneumatic control system with automatic delivery regulation. On customer's request the compressors are complete with compressed air treatment equipment and supplementary options.

Technical parameters range

Parameter	UOM	Range of values
Nominal capacity	m ³ /min	3,0...30,0
Discharge pressure, exc.	MPa	0,8...3,0
Engine power	kW	24,0...294,0
On-board power voltage	V	12 / 24
Operational temperature	°C	-35...+35
Compressed gas	-	Air
Engine type	-	Diesel/turbo-diesel
Chassis type	-	No/1-axis/2-axis
Dimensions	mm	1700x1300x1100...6050x2030x2450
Weight	kg	750...4800

Notes: The model range and detailed technical parameters are specified in Attachment 2.

Application area

Compressor unit	Application area															
	Power	Engineering	Metallurgy	Oil development	Mines, pits	Oil refinery	Chemical industry	Construction	Road construction	Rail road	Food industry	Wire laying	Car service	Small-scale production	Workshop	Emergency services
KV-3/8...KV-6/7P									+					+		
KV-10/8...KV-12/12P									+	+					+	
KV-20/30...KV-30/10P	+							+	+			+			+	
KV-10/8S...KV-12/12S															+	

Notes: compressor units with a diesel engine are not normally equipped with supplementary equipment for compressed air purification due to the intended use in severe conditions with no special requirements to the compressed air quality.

Options

Options	Compressor units

Tool kit	+	+	+	+	+	+

Notes: St – available in standard configuration

Designation interpretation

KV-30/10P

KV – compressor unit mark

30 – nominal capacity at normal cond., m³/min (from 3 to 30.0);

10 – nominal discharge exc. pressure, atm. (from 8.0 to 30.0);

P – model configuration (P – on a chassis, S – special configuration for drilling auto towers, no symbol stands for standard configuration).

SCREW COMPRESSOR UNITS DEN IN EXPLOSION-PROOF DESIGN "MINER" AND "EX"

Brief description

Compressors DEN "Miner" and "Ex" are designed on the basis of horizontal positive-displacement twin-rotary oil-flooded compressors with a coupling joint drive from a motor. DEN "Miner" has an explosion protection marking ExdIa for exploitation in gas-, vapour- and dust-hazardous underground mines and pithead buildings. The compressors have a standard design on a sledge. DEN "Ex" has an explosion protection marking 1Exb-IIB-T4-Gb 1Exdia-IIB-T4-Gb for exploitation in explosion-hazardous technological processes in gas and oil refining industry and extractive enterprises.

Technical parameters range

Parameter	UOM	Range of values
Nominal capacity	m ³ /min	0,8...54,0
Discharge pressure, exc.	MPa	0,7...1,3
Engine power	kW	5,5...400
Operational temperature	°C	+1...+35
Compressed gas	-	Air
Dimensions	mm	1050x600x950...3000x1800x2400
Weight	kg	350...4300

Notes: The model range and detailed technical parameters are specified in Attachment 3 and 4.

Application area

Compressor unit	Application area															
	Power	Engineering	Metallurgy	Oil development	Mines, pits	Oil refinery	Chemical industry	Construction	Road Construction	Rail road	Food industry	Wire laying	Car service	Small-scale production	Workshop	Emergency services
DEN "Miner"					+	+	+									+
DEN "Ex"					+	+	+									

Options

Options	Compressor units	
	DEN "Miner"	DEN "Ex"
Wheel pair	+	
Motor (voltage 660/1140V)	+	+
Methane sensor	+	
Powder fire-extinguishing system	+	+

PISTON COMPRESOR UNITS KP

Brief description

Compressors KP are designed on the basis of positive-displacement multi-stage piston compressors. They contain air and oil cooling and filtration systems, pressure and temperature control systems and are supplied with an electric control unit enabling operation without staff attendance. On customer's request the compressors are complete with auxiliary compressed air treatment equipment and supplementary options.

Technical parameters range

Parameter	UOM	Range of values
Nominal capacity	m ³ /min	0,125...6800,0
Discharge pressure, exc.	MPa	4,0...50,0
Engine power	kW	2,2...160,0
Supply voltage	V	380
Current frequency	Hz	50
Number of phases	-	3
Operational temperature	°C	+1...+35
Compressed gas	-	Air
Motor start	-	Stage/soft
Cooling type	-	Air/air and liquid
Dimensions	mm	650x500x650...3200x1800x2000
Weight	kg	107...4800

Notes: The model range and detailed technical parameters are specified in Attachment 5.

Application area

Compressor unit	Application area															
	Power	Engineering	Metallurgy	Oil development	Mines, pits	Oil refinery	Chemical industry	Construction	Road Construction	Rail road	Food industry	Wire laying	Car service	Small-scale production	Workshop	Emergency services
KP	+	+	+	+			+	+								

Designation interpretation

KP-2500/350

KP – compressor unit mark

2500 – nominal capacity at normal cond., l/min (from 125.0 to 6800.0);

350 – nominal discharge exc. pressure, atm. (from 40 to 500).

PISTON COMPRESOR BOOSTERS KP-D

Brief description

Compressors KP-D are designed on the basis of positive-displacement multi-stage piston compressors. They contain air and oil cooling and filtration systems, pressure and temperature control systems and are supplied with an electric control unit enabling operation without staff attendance. The boosters are used either as a second stage in combination with screw compressor units DEN and air treatment equipment or independently with already existing at site units.

Technical parameters range

Parameter	UOM	Range of values
Nominal capacity	m ³ /min	0,125...6800,0
Starting pressure, exc.	MPa	0,2...3,8
Discharge pressure, exc.	MPa	4,0...42,0
Engine power	kW	5,5...200,0
Supply voltage	V	380
Current frequency	Hz	50
Number of phases	-	3
Operational temperature	°C	+1...+35
Compressed gas	-	Air
Motor start	-	Stage/soft
Cooling type	-	Air/air and liquid
Dimensions	mm	650x500x650...3200x1800x2000
Weight	kg	107...4800

Notes: The model range and detailed technical parameters are specified in Attachment 5.

Application area

Compressor unit	Application area															
	Power	Engineering	Metallurgy	Oil development	Mines, pits	Oil refinery	Chemical industry	Construction	Road Construction	Rail road	Food industry	Wire laying	Car service	Small-scale production	Workshop	Emergency services
KP-D	+	+	+	+			+	+								

Designation interpretation

KP-2/80D

KP – compressor unit mark

2 – number of stages (from 2 to 4);

80 – nominal discharge exc. pressure, atm. (from 40.0 to 42.0);

D – without the first compression stage (booster).

DIESEL GENERATOR UNITS ADGU

Brief description

Units ADGU are designed on the basis of diesel engine electrogenerators, containing cooling liquid and oil cooling and filtration systems and are supplied with an electric control system enabling operation without staff attendance. The units are built both in an open version and canopy. On customer's requests the units are equipped with an automation system putting the unit into operation when other power supply sources become absent.

Technical parameters range

Parameter	UOM	Range of values
Nominal power	kW	10,2...529,0
Max. engine power	kW	11,0...584,0
Number of phases	-	3
Fuel consumption at 100% load	l/h	3,6...128,2
Dimensions	mm	1600x900x1000...4200x1900x2250
Weight	kg	410...5300

Notes: The model range and detailed technical parameters are specified in Attachment 5.

Application area

Compressor unit	Power	Application area														
		Engineering	Metallurgy	Oil development	Mines, pits	Oil refinery	Chemical industry	Construction	Road construction	Rail road	Food industry	Wire laying	Car service	Small-scale production	Workshop	Emergency services
ADGU	+	+	+	+	+	+	+	+	+					+		

Designation interpretation

ADGU-332YAMZ-K

ADGU – generator unit mark

332 – nominal generated power, kW (from 10.2 to 529.0);

YAMZ – engine type (Ya – Yanmar, P – Perkins, V- Volvo, YAMZ – Yaroslavsky motor plant, Russia);

K – housing design (O – open; K – sound insulating housing).

MAIN CYCLONE SEPARATORS SC

Brief description

Separators SC are designed to separate oil and water fractions by using cyclone flow. Special design with no moving parts and filter elements allows prolonging life terms. The separator is mounted directly into the air pipeline normally after the compressor.

Technical parameters range

Parameter	UOM	Range of values
Output rate at norm. cond.,	m ³ /min	1,5...458,0
Nominal pressure	MPa	0,6...0,8
Max. pressure	MPa	2,0
Pressure losses	MPa	0,001
Purity	%	>99,0
Weight	kg	1...662
Connection	-	thread/flange
Condensate drain	-	Automatic

Notes: The model range and detailed technical parameters are specified in Attachment 8.

Designation interpretation

SC-140R

SC – separator mark;
140 – output rate, m³/h (from 140 to 529.0);
R – connection type (R – thread, F – flange).

MAIN AIR FILTERS FV

Brief description

Filters FV depending on the filtering element type are designed for purification of the compressed air from mechanical particles (wear debris, abrasive particles, rust etc.), oil, water, acids, dust, vapours and scents. The separator is mounted directly into the air pipeline.

Technical parameters range

Parameter	UOM	Range of values
Output rate at norm. cond.,	m ³ /min	1,6...510,0
Nominal pressure	MPa	0,6...0,8
Max. pressure	MPa	1,6
Pressure losses	MPa	0,007...0,014
Purity	%	>99,0
Filtration rate	micron	0,01...3
Residual concentration	mg/m ³	0,001...5,0
Weight	kg	2...435

Notes: The model range and detailed technical parameters are specified in Attachment 9.

Designation interpretation

FV-0510R

FV – filter mark;
0510 – output rate, m³/h (from 100.0 to 24600.0);
R – connection type (R – thread, F – flange).

REFRIGERATION DRYERS OVR

Brief description

The dryers OVR are designed for removal of residual moisture from the compressed air (after separators, after coolers and drainage devices) in order to prevent condensation in pipelines, machine and equipment channels. The operation is based on the principle of cooling an air flow to the required dew point by forced condensation. Due to their specific features the dryers cannot provide drying below the dew point +2°C.

Technical parameters range

Parameter	UOM	Range of values
Output rate at norm. cond.,	m ³ /min	0,7...110,0
Nominal pressure	MPa	0,7...1,3
Power	kW	0,3...17,0
Air temperature at inlet	°C	+5...+45 (80)
Dew point	°C	+2...+10
Residual moisture content	g/m ³	5,57...9,36
Weight	kg	50...980

Notes: The model range and detailed technical parameters are specified in Attachment 10.

Designation interpretation

OVR-0510R

OVR – dryer mark;

0510 – output rate, m³/h (from 50.0 to 6600.0);

R – connection type (R – thread, F – flange).

ADSORPTION DRYERS OVA

Brief description

The dryers OVA are designed for removal of residual moisture from the compressed air (after separators, after coolers and drainage devices) in order to prevent condensation in pipelines, machine and equipment channels. The operation is based on the principle of moisture adsorption when the air flow passes a tower with an adsorbent. Depending on the adsorbent being in use and on the flow condition the dew point of -70 °C may be achieved.

Technical parameters range

Parameter	UOM	Range of values
Output rate at norm. cond.,	m ³ /min	0,7...55,0
Nominal pressure	MPa	0,7...1,3
Flow losses for regeneration	%	<15,0
Air temperature at inlet	°C	+2...+45
Dew point	°C	-20...-60 (-70)
Residual moisture content	g/m ³	2,16...0,011 (0,003)
Weight	kg	105...1650

Notes: The model range and detailed technical parameters are specified in Attachment 11.

Designation interpretation

OVA-0510R

OVA – dryer mark;

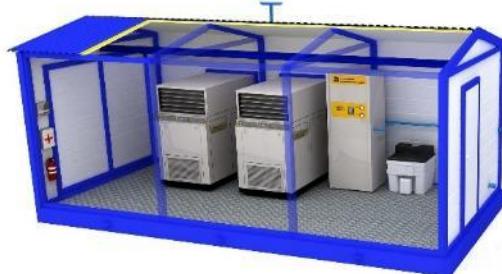

0510 – output rate, m³/h (from 50.0 to 6600.0);

R – connection type (R – thread, F – flange).

COMPRESSOR STATIONS BKK (MKS)

Brief description

Compressor station BKK (MKS) are based on the produced compressor units and air treatment equipment supplied in a single ready-to-use block container (BKK) or in several typical containers (MKS) having various application (air compression, air purifying, electric power automation, operator's room, household use, etc.). The stations are equipped with the systems of heating, ventilation, lighting, fire and security alarm; remote intelligent control enabling staff-free operation.

Technical parameters range

Parameter	UOM	Range of values
Compressed gas	-	Air
Nominal capacity	m ³ /min	2,0...100,0 (to 400)
Nominal pressure, exc.	MPa	0.5...1.5 (to 40.0)
Rated power	kW	20...500.0 (to 1500.0)
Operational temperature	°C	-40...+40
Number of receivers	-	1...8 (to 0.9)
Dew point	°C	+10 / +3 / -20 / -40 / -60
Size of mechanical particles	micron	5...0,01
Dimensions of the 1 st container	mm	4500x2900x3100 (the smallest) 12000x2900x3100 (the largest)
Weight of the 1 st container	kg	from 6000
Number of containers (modules)	-	From 20

Notes: the values are specified for a standard station, on customer's request the values can be modified according to the project.

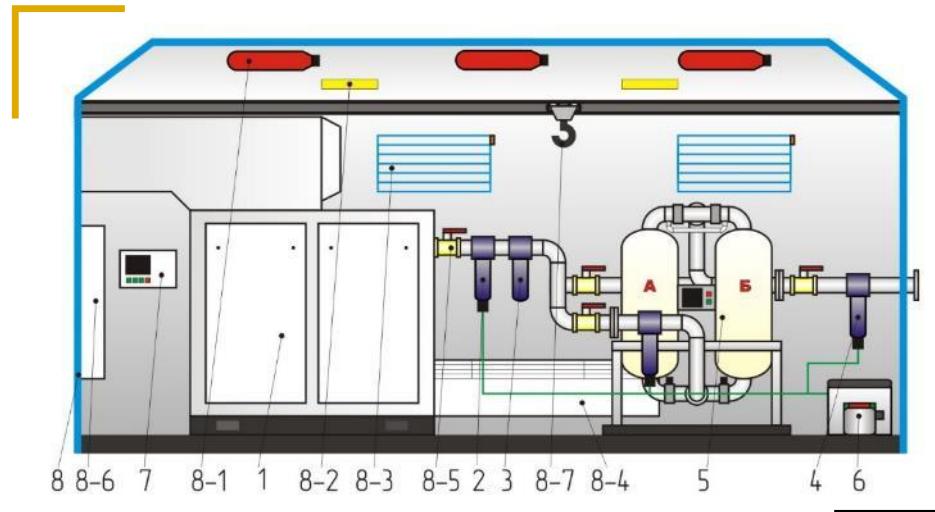

Application area

Compressor unit	Application area															
	Power	Engineering	Metallurgy	Oil development	Mines, pits	Oil refinery	Chemical industry	Construction	Road Construction	Rail road	Food industry	Wire laying	Car service	Small-scale production	Workshop	Emergency services
Compressor stations BKK (MKS)	+	+	+	+			+	+		+	+			+	+	

Notes: machine and equipment nomenclature is defined by the company specific

Specification of standard configuration

Pos.	Name	Mark
1	Screw compressor unit	DEN / DEN "Optim" / DEN "Volt"
2	Cyclone water separator	SC
3	Air filter mark	FV-.../1,0P...FV-.../1,0F
4	Air filter	FV-.../0,01P...FV-.../0,01F
5	Adsorption dryer	OVA
6	Water and oil separator	UFS
7	Intelligent control system	Metacentre P4
8	Standard block-container	4500x2900x3100...12000x2900x3100
8-1	Powder fire extinguisher	OSP-2
8-2	Indoor and outdoor light	Lamp + projector
8-3	Automatic air valves	600x1600
8-4	Electric heater	KV-2 / KV-10
8-5	Pipeline fittings	Package
8-6	Electrical distribution panel	Lead-in distributor
8-7	Hand chain hoist	1000 kg or 2000 kg

Designation interpretation

BKK-64/10-2

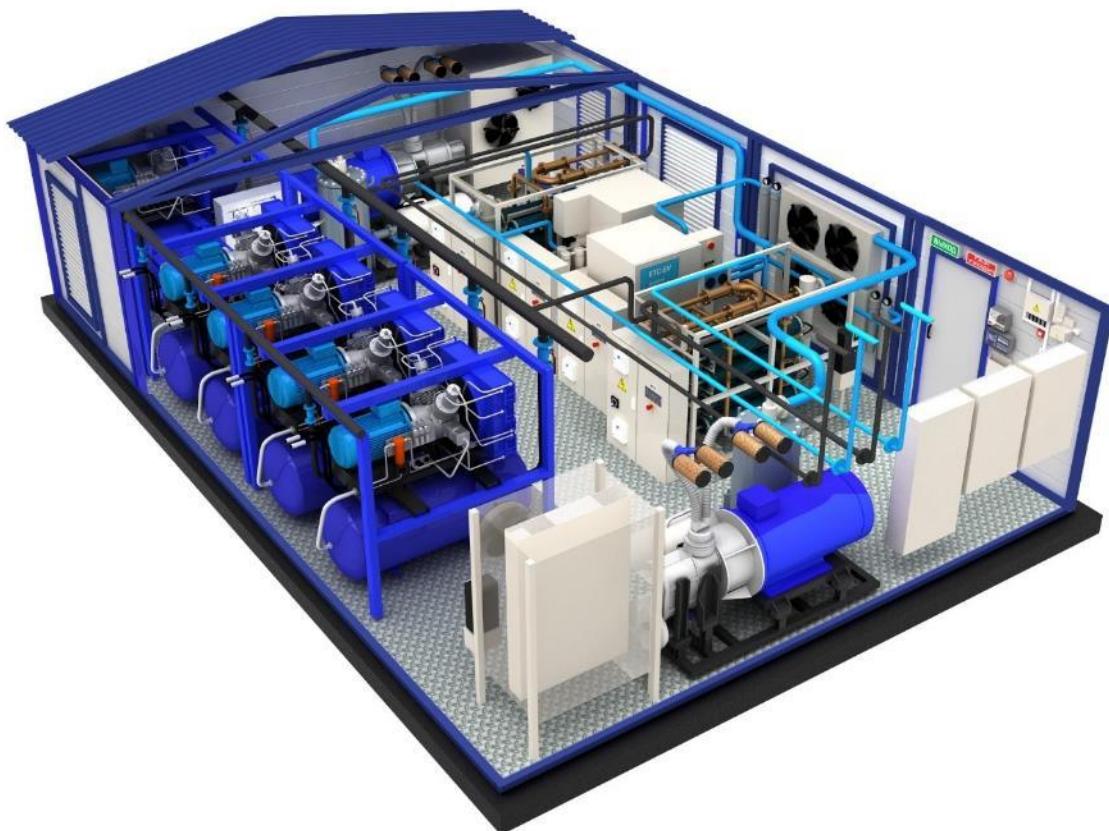

BKK – station mark (BKK or MKS);
 64 – nominal capacity at normal cond., m³/min;
 10 – nominal discharge exc. pressure, atm.;
 2 – number of compressor units

NITROGEN COMPRESSOR STATIONS BKK (MKS) AMU

Brief description

Compressor station BKK (MKS) AMU are based on the produced compressor units and air treatment equipment and supplied in a single ready-to-use block container (BKK) or in several typical containers (MKS). Nitrogen separation is performed in a membrane unit after air compression in a compressor unit. Nitrogen of high pressure can be produced with the use of a booster station KP-D. Partial air bleed to other consumers is also available. The stations are equipped with the systems of heating, ventilation, lighting, fire and security alarm; remote intelligent control enabling staff-free operation.

Technical parameters range

Name	UOM	Range of values
Nitrogen delivery, norm. cond.	m ³ /min	up to 25.0
Discharge nitrogen pressure, nominal, exc.	MPa	0.7...1.0 (to 40.0)
Nitrogen content	%	95...99.95
Air delivery, norm. cond.	m ³ /min	up to 100.0
Discharge air pressure, nominal, exc.	MPa	1,0
Dew point	-	+10 / +3 / -20 / -40 / -60
Number of nitrogen flows	-	1 / 2
Number of nitrogen flows	-	1 / 2
Dimensions of the 1 st container	mm	8000x2900x3100 (the smallest) 12000x2900x3100 (the largest)
Weight of the 1 st container	kg	from 6000
Explosion protection	-	Not available/ available

Notes: the values are specified for a standard station, on customer's request the values can be modified according to the project.

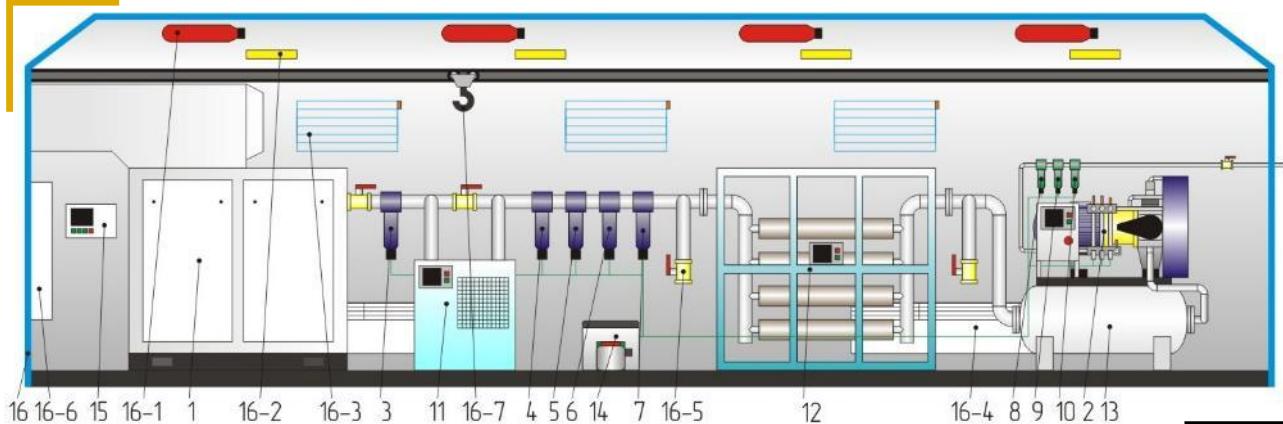

Application area

Compressor unit	Область применения															
	Power	Engineering	Metallurgy	Oil development	Mines, pits	Oil refinery	Chemical industry	Construction	Road construction	Rail road	Food industry	Wire laying	Car service	Smallscale production	Workshop	Emergency services
BKK (MKS) AMU	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+

Notes: machine and equipment nomenclature is defined by the company specific

Specification of standard configuration

Pos.	Name	Mark
1	Screw compressor unit	DEN
2	Booster compressor unit	KP-D
3	Cyclone water separator	SC
4	Air filter	FV-1
5	Air filter	FV-0.01
6	Air filter	FV-0.001
7	Air filter	FV-0.003
8	Air filter of high pressure	HD-(0,01/MF)
9	Air filter of high pressure	HD-(0,01/SMF)
10	Carbon air filter of high pressure	HD-(0,01/AK)
11	Refrigeration dryer	OVR
12	Membrane nitrogen separating unit	AMU
13	Horizontal receiver	RG
14	Water and oil separator	UFS
15	Intelligent control system	Metacentre SX
16	Standard block-container	
16-1	Powder fire extinguisher	OSP-2
16-2	Indoor and outdoor light	Lamp+projector
16-3	Automatic air valve	600x1600
16-4	Electric heater	220V, 2 kW
16-5	Pipeline fittings	Package
16-6	Electrical distribution panel	Lead-in distributor
16-7	Hand chain hoist	1000 kg or 2000 kg

Designation interpretation

BKK-64/10-2 AMU

BKK – station mark (BKK or MKS)

64 – nominal air capacity at normal cond., m³/min;

10 – nominal discharge exc. pressure before the nitrogen unit, atm.

2 – number of compressor units

AMU – type of the gas separating unit (membrane nitrogen)

COMPRESSOR STATIONS OF ASSOCIATED PETROLEUM GASES KS-PNG

Brief description

The specially designed stations KS-PNG in explosion-proof version secure boosting and transportation of associated gases for its further processing. The gas can be supplied to the station both under vacuum gage pressure (VKS-PNG model) and excessive pressure (DKS-PNG). The station is built in an all-season block- container, in standard configuration split into two sections: the one section houses explosion-proof technological equipment, the other section houses electric power automation and control systems.

Technical parameters range

Name	UOM	Range of values
Compressed gas	-	associated petroleum gas
Category and group of explosion-hazardous mixture	-	IIAT4
Nominal capacity	m ³ /min	up to 167.0
Starting pressure, exc.	MPa	0,05...0,9
Discharge pressure, exc.	MPa	1,5...2,9
Total power (approx.)	kW	up to 1000
Capacity regulation	%	0...100
Type of capacity regulation	-	spool-type – stage-free
Initial gas temperature	°C	1...35
Final gas temperature	°C	50...95
Relative humidity	%	100
Voltage	V	380
Machine and equipment reserve	%	100
Station dimensions	mm	12000x2900x3100 (compressor block) 9000x2900x3100 (control block)
Station weight	kg	up to 35000

Notes: the values are specified for a standard station, on customer's request the values can be modified according to the project.

Application area

Compressor unit	Application area															
	Power	Engineering	Metallurgy	Oil development	Mines, pits	Oil refinery	Chemical industry	Construction	Road Construction	Rail road	Food industry	Wire laying	Car service	Small-scale production	Workshop	Emergency services
KS-PNG				+	+											

Notes: the values are specified for a standard station, on customer's request the values can be modified according to the project.

Designation interpretation

VKS-64/10-2 PNG

VKS – station mark (VKS or DKS);

64 – nominal gas capacity at normal cond., m³/min;

10 – nominal discharge exc. pressure, atm.;

2 – number of compressor units;

PNG – compressed air (associated petroleum gas).

MULTIFUNCTION MODULAR PUMP STATIONS CNP

Description

Pump stations are being built on the basis of centrifugal pumps produced by such domestic manufacturers as Yasnogorsky Pump Plant LLC, GMC-Livgidromash JSC and such foreign ones as Grundfos of the following types.

- console;
- with two side input;
- sectional multistage.

The standard pump drive is electric (others – upon request).

The station is placed inside of the all weather standard container, which does not require any special base and which is supplied with such life support systems as:

- burglar and fire alarm;
- powder and gas automatic firefighting;
- heating, venting and conditioning system and others.

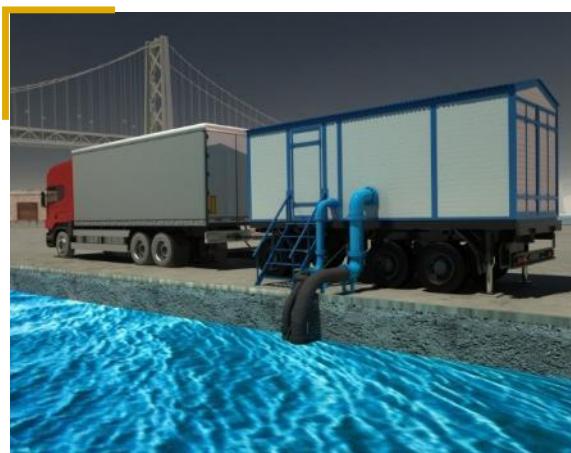

In case of big capacities need the station can consist of several containers, which can be either separate or joined into one building.

The design is modular, that allows:

- designing the station in the shortest terms;
- modifying the already existing station with new equipment in order to enlarge its application;
- increasing the capacity fast and simple.

The standard station control system is intellectual, that applies the regulation algorithms in accordance with a specific regime, operation conditions and company manufacturing branch. Upon customers request the system can be supplemented with the following options:

- data transmission to the senior control system;
- station status update by mobile phone or email;
- remote control of the status by mobile phone or PC with internet access.

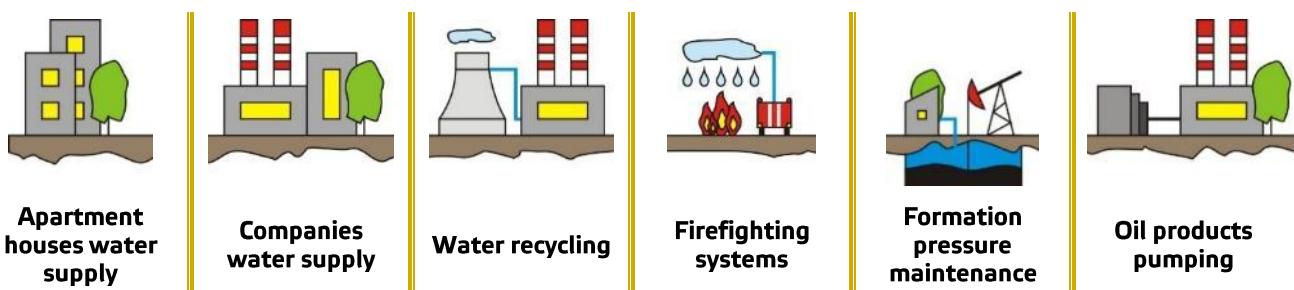

Technical parameters range

Parameter		Unit.	Designation
Centrifugal electric pump type		—	console; with two side input; sectional multistage.
Nominal delivery of 1 pump	console	m ³ /h	10,0 ... 200,0
	with two side input		70,0 ... 2000,0
	sectional multistage		2,5 ... 60,0
Nominal pressure of 1 pump	console	MPa	0,16 ... 0,9 (1,0)
	with two side input		0,10 ... 1,25 (1,60)
	sectional multistage		0,11 ... 1,60 (2,0)
Pumps in a station	total	—	6
	main		1 ... 6 (10)
	reserve		1 ... 3 (5)
Nominal delivery of a station	console	m ³ /h	60,0 ... 1200,0 (2000,0)
	with two side input		140,0 ... 12000,0 (20000,0)
	sectional multistage		25 ... 360,0 (600,0)
Nominal pressure of a station	console	MPa	0,7 ... 0,9
	with two side input		0,5 ... 0,7
	sectional multistage		2,3 ... 3,5
Pumping depth	self-priming	m	≤ 6
	ejector -vacuum		< 10
	ejector -volume		≤ 20
Station power		kW	20,0 ... 4000 (6300)
Delivery regulation mode		—	throttle / frequency / cascade-throttle / cascade - frequency
Regulation pumping depth	throttle	%	20 ... 25
	frequency		15 ... 20
	throttle-frequency		15 ... 35
Pumping liquids		—	drinking water / water technology / sea water / oil
Station weight		kg	2500 ... 16000 (25000)
Submersible parts weight	throttle	kg	≥ 100
	frequency		≥ 330
	throttle-frequency		≥ 350
Standard containers quantity		—	1 ... 6 (10)
Standard container dimensions (LxWxH)		mm	4500x2900x3100 6000x2900x3100 8000x2900x3100 10000x2900x3100 12000x2900x3100
Dimensions of station on chassis (LxWxH)	Minimum (2-axis)	mm	4400x1900x1900
	Maximum (3-axis)		8200x2900x4500

Note: in brackets there are maximum data reached by a standard station

Note: technical parameters are valid for the liquid pumping ambient with $\nu \approx 1 \text{ cSt}$, $\rho = 1000 \text{ kg/m}^3$ and $t = 20 \dots 25^\circ\text{C}$.

Application field

Modules types

Control

- Microprocessor system
- Electro-mechanical system
- Remote control

Pump

- Console
- With two side input
- Sectional multistage

Supply

- Electric
- Diesel electric

Housing

- Insulated container
- Non-Insulated container

Mobile

- Stationary (no chassis)
- On a trailer chassis
- On a railway chassis
- On slide

Piping

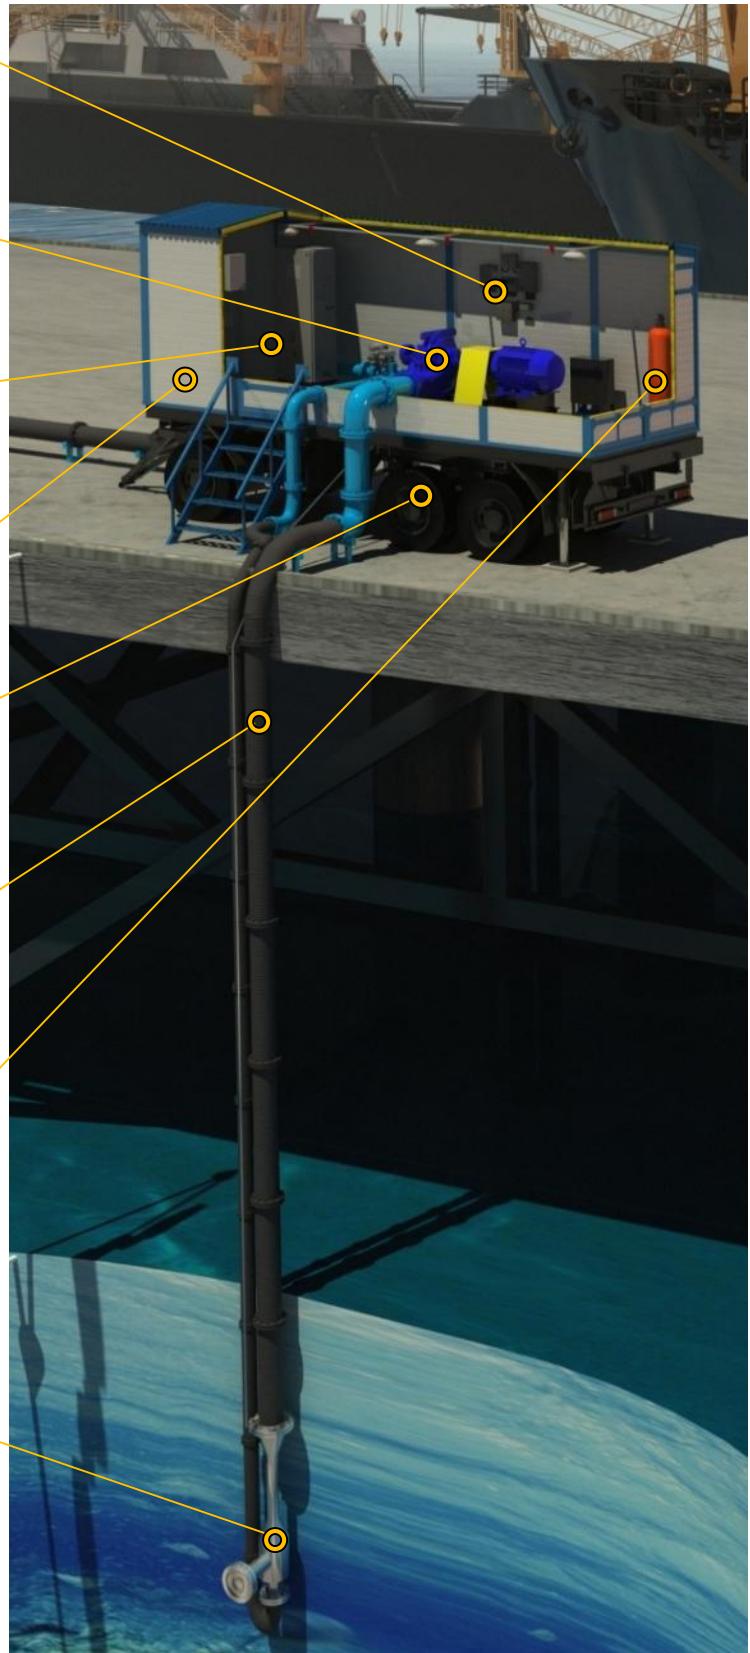

- Standard
- With ejection

Safety

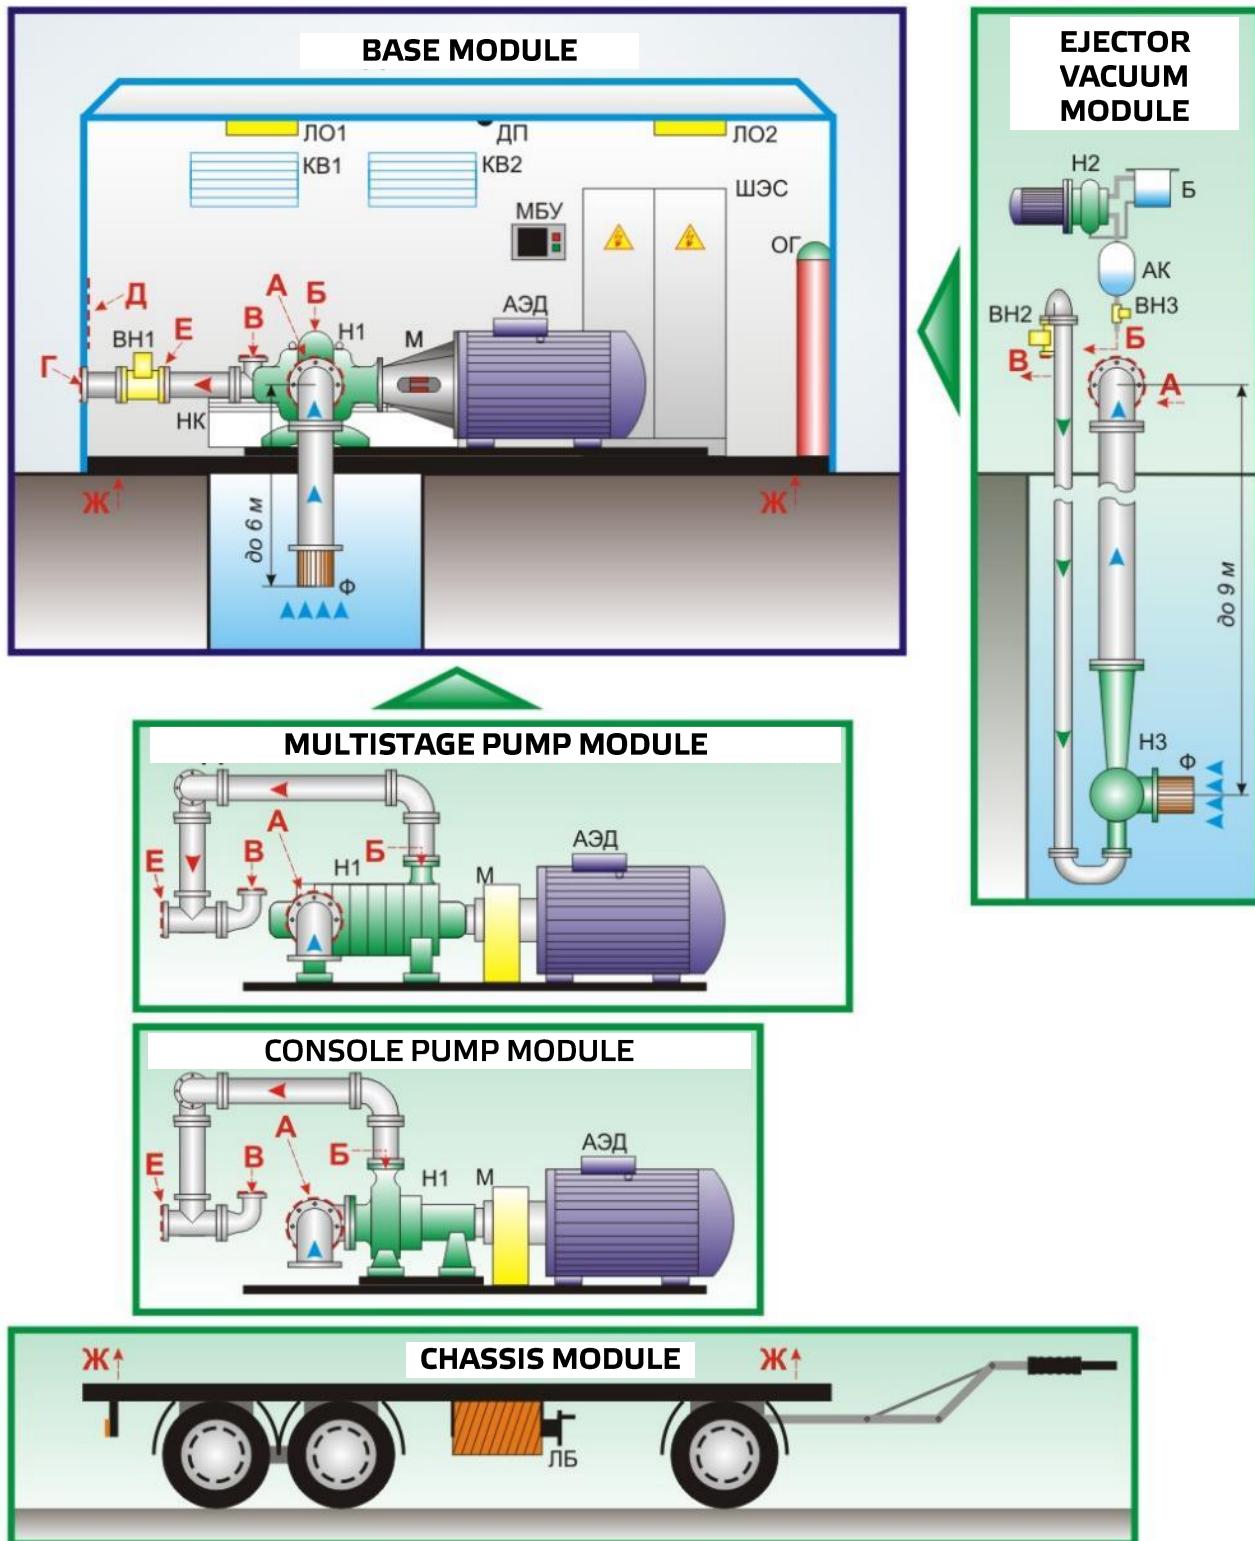

- Firefighting
- Firefighting and lightening
- Firefighting, lightening, venting, heating, burglar alarm

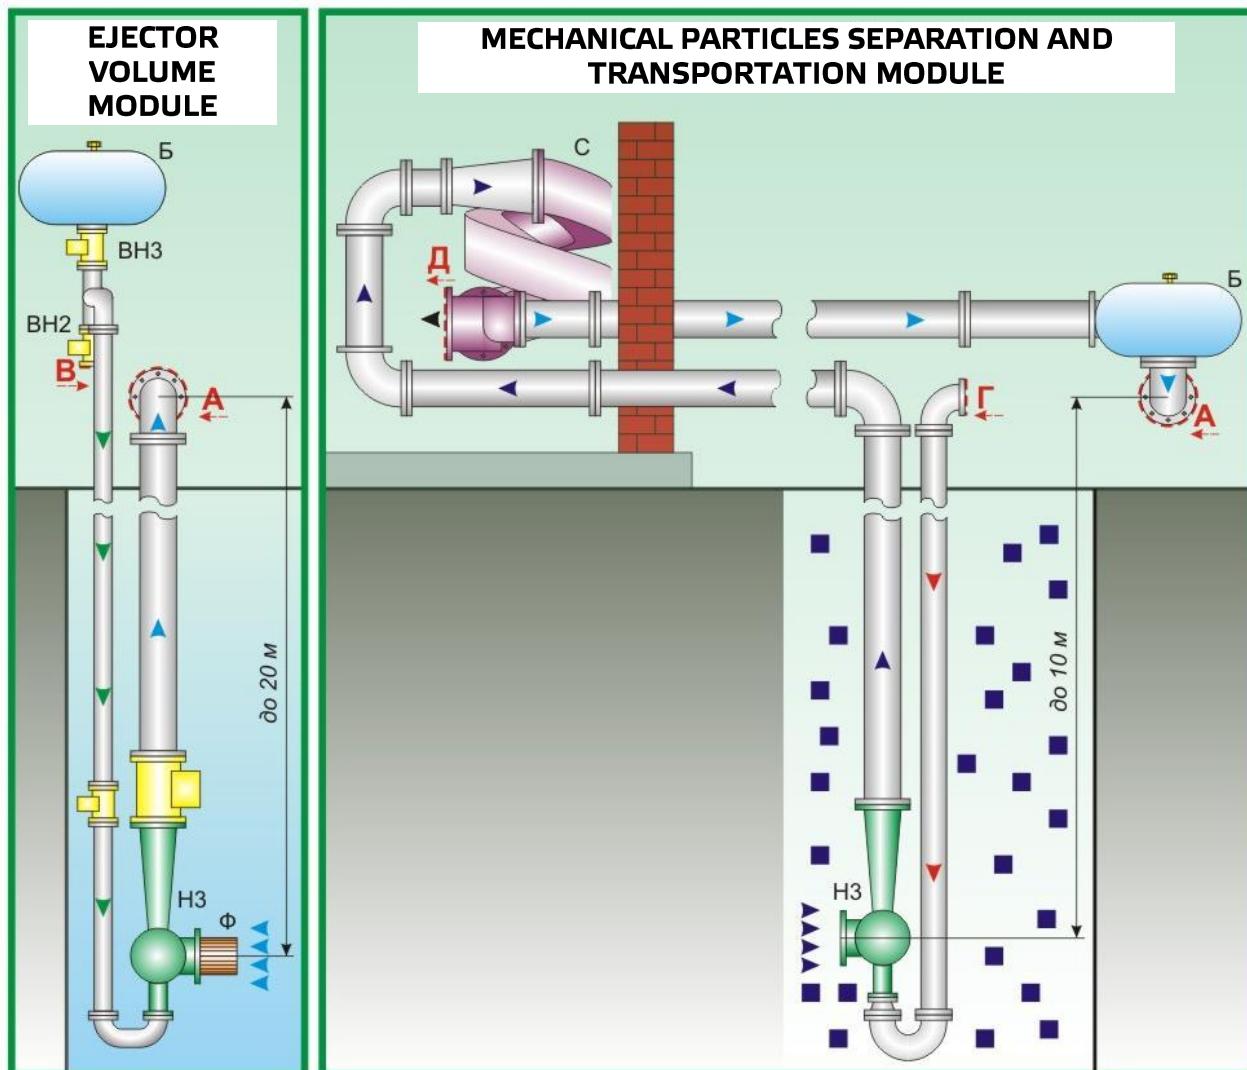

Ejection

- With vacuum pump and ejector
- With prefill tank and ejector
- With prefill tank, ejector and separator

Modular construction principle

MODULES CONNECTIONS

- А – intake piping connection
- Б – prefill piping connection
- В – active flow piping connection
- Г – pressure piping connection
- Д – separation piping connection
- Е – pump pressure piping connection
- Ж – chassis base connection

FLOW DIRECTION

- – основной напорный
- – всасываемый
- – всасываемый с
антическими примесями
- – активный в эжектор
- – продукт сепарации

REFERENCE

- Н1 – main pump
- Н2 – vacuum pump
- Н3 – ejector
- АЭД – electric asynchronous motor
- М – drive coupling
- Ф – intake filter
- ВН1 – main vent
- ВН2 – active flow regulation vent
- ВН3, ВН4, ВН5 – pump prefill vents
- АК – accumulator
- Б – tank
- С – mechanical impurities separator
- МБУ – multifunctional control unit
- ШЭС – electric cabinet
- ЛО1, ЛО2 – lightning
- ДП – smoke sensor
- ОГ – gas fire extinguisher
- КВ1, КВ2 – air venting valve
- ЛБ - cable hoist

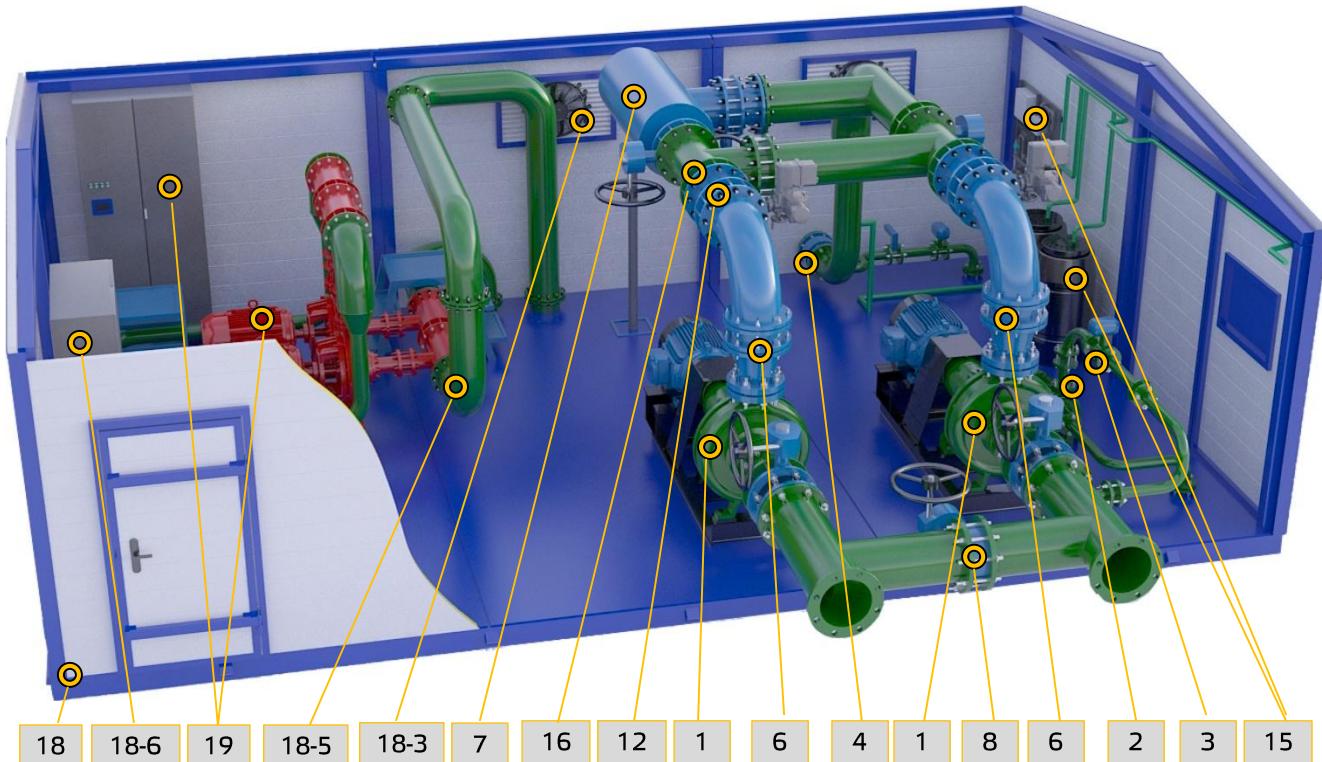

Specification of standard configuration

No.	Name	Type	Q-ty

11-6	In-house power cabinet	ShCN 2...20 kW	1...2
11-7	Hand chain hoist	TRShB 1000 kg	1

Note: items 11-1 to 11-7 are included in the standard version of item 11.

Note: the specification is for the standard station, but it can be modified in accordance with project peculiarities.

Note: items. 3, 6, 11-1, 11-2, 11-4 and 11-7 are not shown.

Fire-extinguishing station versions

The principle of foam extinguishment action is based on **water and foam agent chemical reaction**, thanks to which highly adhesive foam is formed, i. e. the one which is able to be **attracted and held at the material surface**. When the foam is delivered to the hot material, it creates the solid layer, which prevents the oxygen access. Such way of fire extinguishment can be compared to covering the fire with the earth or covering the fire area with the counterpane.

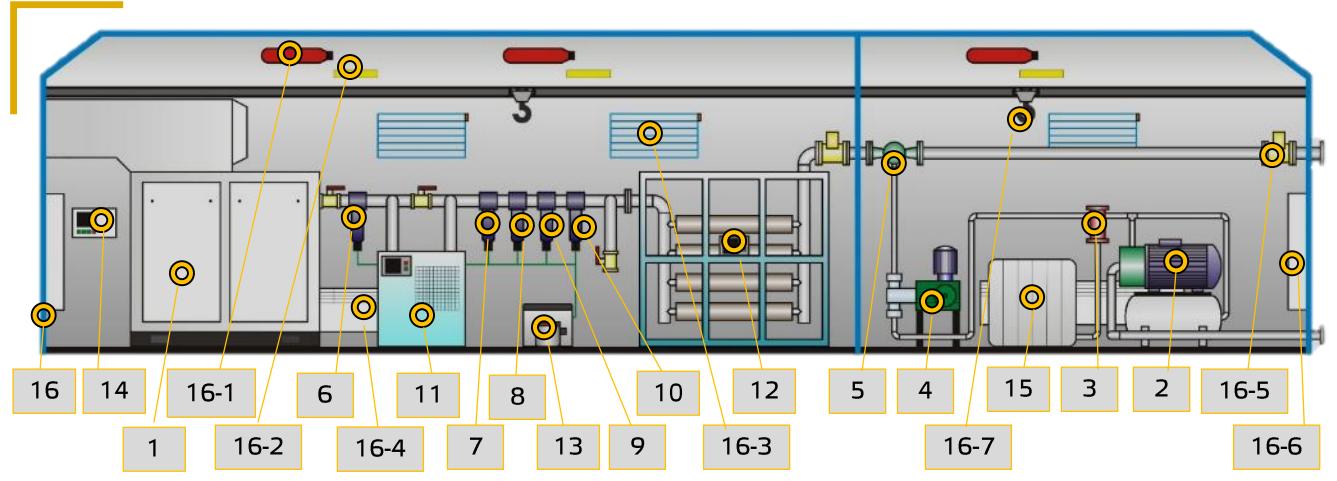

One of the important properties of the foam is **non-conductivity**, that is why foam extinguishment is used for the objects with electric equipment, machines, tools etc.

Compressed extinguishment has a number of advantages compared to water extinguishment, first of all thanks to reduced water flow along with far higher efficiency. Foam can be mixed up with the air, however in such systems the air does not stop the fire and is used mainly due to its availability. For fire extinguishment in the closed difficult-to-approach rooms, such as, pits, inflammable storages, etc It is reasonable to use nitrogen-foam extinguishment system, as it ensures triple effect:

1. Foam adhesion prevents from oxygen supply to the fire area.
2. Reduction of water volume – increase of extinguishment duration.
3. Air, which sustains combustion, is replaced by nitrogen.

Fire-extinguishing stations specification

No.	Description	Типоразмер (марка)	Q-ty
1	Screw compressor unit	DEN-15Sh Optim ... DEN-132ShM Optim	1
2	Centrifugal pump	K , 1K, 2K (cantilever)	1
3	Metering motor-pump	MNPd	1
4	Piston type pump	NVD	1
5	Mixer	Gas-liquid jet	1
6	Cyclone separator	CS	1
7	Air filter	FV-1	1
8	Air filter	FV-0,01	1
9	Air filter	FV-0,001	1
10	Coal air filter	FV-0,003	1
11	Refrigerated air dryer	OVR	1

16-4	Heating system	Electric convention heater 1,5 kW	4...8
16-5	Pipeline fittings	-	Компл.
16-6	In-house cabinet	ShCN	1
16-7	Hand chain hoist	TRSb 1000 kg / TRSb 2000 kg	1

Note: item 16-1 – 16-7 are included in the standard version item 16.

Designation interpretation

CNP-2N.60.160.63AC12.3

CNP – station model;

2 – number of pumps (1 to 6);

N – application (**N** – general application; **P** – fire-extinguishing; **V** – water recycling supply; **D** – maintenance of reservoir pressure; **K** – condensate pumping; **M** – oil products pumping; **H** – chemical pumping)

60 – max. discharge head, m;

160 – max. delivery, m³/hour

63 – max power if all the equipment and devices operate (back-up machines and equipment are not taken into consideration), kW;

A – suction conditions (**A** – directly without any additional devices; **B** – ejector with vacuum liquid-packed ring pump; **V** – ejector with pre-filled tank; **G** – mechanical impurities separator);

S – mobility (**S** – stationary; **Sh** – chassis);

1 – drive type (**1** – asynchronous electric, **2** – diesel);

2 – centrifugal pump type (**1** – cantilevered, **2** – double entry, **3** – multistage horizontal, **4** – multistage vertical);

3 – station automation degree (**1** – small functional ... **4** – max functional).
